

FOR IMMEDIATE RELEASE

Enhancements to LiquiFire OS means More Speed and Better Performance

LiquidPixels strengthens their flag-ship product; LiquiFire Operating System

ROCHESTER – October 2, 2017 – The e-commerce industry has a major focus on the customization of content to increase the value of your shoppers online experience. To better serve the industry and their customers, LiquidPixels is announcing an upgrade to their core product-LiquiFire Operating System (OS).

“As a free upgrade to our customers, we’ve updated LiquiFire OS again,” said Marc Spencer, LiquidPixels co-founder and CTO. “This upgrade is in direction response to technology advances, direct input from our customers, and as usual, the latest security related updates.”

According to Spencer, the greatest improvement surrounds the “Drape Command” within LiquiFire OS. Many calculations that were unrelated to the texture image when drape was called slowed down the performance of the web page. To save on time these pre-calculated values will be cached in the LiquiFire Intermediate Grid File.

Future drape commands will use this file instead of doing the more computational intensive grid file. This will be running silently in the background, but creates a noticeable speed difference.

As the leading provider of dynamic imaging solutions, LiquidPixels strives to meet the needs of existing customers and establish the bar of customizing products online for a better shopping experience. With the added features and promoted software upgrades, LiquiFire OS continues to be the most powerful system providing dynamic imaging capabilities.

As usual this free update will be rolled out to our customers leading up to the expected fourth quarter freeze, as this is most often the time when LiquidPixels customers can reflect and prepare for a busy holiday season and plan for all the amazing things in the upcoming year. LiquidPixels, as an organization, is always ready to support our customers and their initiatives.

About LiquidPixels

LiquidPixels leads the imaging revolution. Built on open standards, the LiquiFire Dynamic Imaging Solutions integrate into existing Web and workflow environments, enhancing product creation and visualization, while reducing production costs. LiquidPixels makes its patented technology available as a hosted service or via on-site enterprise servers with solutions that may be tailored to each customer’s unique needs.
