

FOR IMMEDIATE RELEASE

Verizon Digital Media Services introduces Verizon Dynamic Imaging, powered by LiquidPixels LiquiFire OS

- Websites such as TheNation.com now use Verizon Dynamic Imaging to automate on-the-fly image resizing and transcoding to improve picture quality and delivery speeds, all while reducing image management costs -

ROCHESTER – August 21, 2017 – Verizon Digital Media Services, part of Oath, and [LiquidPixels, Inc](#) announced today they have worked together to bring dynamic image optimization to websites supported by the Verizon Edgecast Content Delivery Network (CDN). The all-new Verizon Dynamic Imaging option powered by [LiquidPixels® LiquiFire® Operating System](#) allows users to maintain just one version of each image used on their websites – by enabling dynamic image resizing, automated image reformatting and flexible file compression. In addition to improving website image quality and load speeds, the new solution helps reduce the cost and complexity of image storage and management.

“No matter the device, screen or browser, speed is of the essence for web browsing; end users will not tolerate slow load times,” said Ted Middleton, chief product officer at Verizon Digital Media Services. “By collaborating with LiquidPixels, we are now offering our customers – numerous leading media and e-commerce sites – a seamless way to have access to dynamic imaging that ultimately results in performance improvements and enhanced user experiences.”

“Dynamic imaging provides enhanced media and shopping experiences, with more customization and faster load times,” said Steve Kristy, CEO of LiquidPixels. “We’re very pleased that Verizon Digital Media Services embraces the true power of dynamic imaging from LiquidPixels and is providing it to their customers through our combined efforts to keep them ahead of the industry when it comes to creating that ultimate online experience.”

Verizon Dynamic Imaging is already up and running at TheNation.com, the online home of the U.S.’s oldest weekly magazine. The Verizon Dynamic Imaging solution optimizes the website’s images while the Edgecast CDN delivers content to various viewing devices.

“Superior image quality and faster load times translate to increased viewership and revenue,” said John Cary, vice president, digital products, at The Nation. “Requiring little to no work on our end, Verizon Dynamic Imaging has eliminated our need to manage thousands of different images and in turn, has alleviated the hassle and cost associated with image management for our website.”

The Edgecast CDN is purpose-built for the rich-media, large file, broadband web of today – and tomorrow. Thanks to continual refinement, enhancement, and expansion, the Edgecast CDN offers exceptional performance and reliability for the many leading internet companies it supports worldwide.

Verizon Digital Media Services is part of Oath, a house of more than 50 media and technology brands that reaches over one billion people around the world.

About Verizon Digital Media Services

Verizon Digital Media Services offers an industry-leading, end-to-end digital media platform to prepare, deliver, display, and monetize online content. The platform is built on the world's largest, most connected network, and has over 100 points of presence on five continents, ensuring high-quality viewing of digital content on any device, anytime, anywhere. The company provides the foundational components in websites, apps, and OTT video services for many of the world's largest publishers, media companies and enterprises.
